

Agility from Risco

High Grade Wireless Intruder Alarm System

INCORPORATING ADVANCED TWO-WAY WIRELESS TECHNOLOGY

Fully Wireless, minimal disruption for installation.

(Main Control panel requires mains supply & telephone line where used)

Voice Status Confirmation (optional) from Main Panel

Integral Sounder to Main Panel

Main Features

English Text Display

Time & Date

Zone Descriptions

User Names

Event Log: 250 Events

Zones: 32 Fully Programmable wireless

Number of User Codes: 32

Part Sets: 3

Multi Option Remote Communication Capability

Central Station Monitoring or Self Monitoring using Land Line or GSM options are available.

i-Wave Wireless PIR Detectors

Incorporating advanced two-way Wireless Technology
Standard & Pet Versions

Also Available:

- Magnetic Contacts
- Shock Detectors
- Glass Break Detectors
- Smoke Detectors
- Carbon Monoxide Detectors
- Gas Detectors
- Panic Alarm Fobs
- Outdoor Detectors

Fully Wireless Key Pad

Backlit Blue Display.

Set / Unset with Code or Fob.

2 X G Tag Proximity Fobs Supplied.

Multi-Function Wireless Remote Available

(Additional Cost Option)

Wireless Alarms -

Points to be aware of.

In order to conserve battery life, Detectors have a 'dead' time. In practice this means that once a detector has been triggered it cannot be triggered again for two and a half minutes. This does not effect the integrity of the system as a single detection will generate an alarm if the system is set and has settled down. However, this can cause confusion if a system is being tested by the user.

Radio interference is possible but not very likely as the frequencies used, the methods of encoding and advanced two way wireless technology used vastly are different from those used for low cost and DIY equipment.

Certain types of building construction can cause a vastly reduced range between the detection device transmitter and the receiver.

Fully Wireless External Bell Box

Fully Wireless Internal Bell Also Available
