HD IMAGERY ON AN ANALOGUE PLATFORM

**HD
960H**

Digital Video Recorder

The Vista Quantum Xtra and Quantum Plus 960H Series full size Digital Video Recorders provide REAL TIME continuous High Resolution Recordings to HD960H with the facility to copy any incidents to a DVD as required for evidence purposes. They have the capacity to record for the designated period of time without sacrificing recorded picture quality. Available in 4, 8 & 16 Camera Capacity Versions.

The Quantum 960H range of DVRs offer real time recording at HD quality, providing an increase of up to 25% in image quality (when used with matching 960H (700TVL) cameras) on recorded images compared to D1 DVR's. This is achieved with no extra overhead on storage. These class leading DVRs allow users to upgrade to HD imagery on an analogue platform plus are fully backwards compatible with all existing analogue cameras. These powerful DVRs provide telemetry control of PTZ cameras and domes via RS485 or coaxial telemetry direct from front panel controls, mouse, remote keyboard or client software. The inclusion of an HDMI main monitor output ensures high quality images, plus 2 programmable spot monitors allow for extremely flexible user displays allowing Individual monitors to be set up to respond to specific events and use the required sequence pattern. Due to their high performance and rich feature set, the full range is suitable for the majority of CCTV applications. Recording of images per second and image quality is adjustable on a per camera basis via schedule, VMD, and alarm activations. Operation is controlled via a standard mouse, making it simple and intuitive to use. The speed and quality of the recorded images allows them to be used for evidential purposes, while the simple search and download facility to DVD, CD or USB makes handling and transferring the images quick and easy.

Key Features:

HD 960H Video

This latest recording technology matches the DVR recording system to the cameras to produce an industry leading recording Quality

iPhone and Android APPS

These free of charge applications allow remote monitoring of the DVR from mobile handsets

Real time 960H recording & playback

Records 25ips per camera, up to 400ips global recording & review

Multiple monitor outputs

HDMI & VGA monitor outputs for excellent picture quality, plus 2 programmable spot outputs give the operator greater viewing flexibility, than other similar specification DVRs

Intuitive set-up menus

Driven from the front panel, mouse or remote keyboard making it easy for the end user to operate

Up to 12TB of storage onboard the unit

Enough storage to cover the vast majority of applications

Vista is the UK's most popular brand of CCTV equipment and can be seen in a vast number of applications across the world from retail outlets and town centres to sports stadiums and banking enterprises. The Vista range of products is continually being developed and enhanced by their UK-based design team, with a continuing focus on combining innovation with simplicity. This ensures that the market enjoys a range of products that is both powerful in design but operates with a minimum of complexity. Vista has an in-depth understanding of the market requirements and the advancing technologies
